WHO WE ARE

All Lift offers warehouse storage solutions Canada-wide, and are ready to assist with all your racking, storage and shelving needs. Our material handling experts offer FREE consultation and design support to help you meet your project and productivity goals.

Our experienced team ensures that your storage systems are not only efficiently installed but also maintained to the highest standards, ensuring longevity and safety. With our end-to-end support, you can trust us to maximize your storage potential and productivity, allowing you to focus on your core business operations with peace of mind.

QUALITY RACKING

At All Lift, the quality of our product is paramount. This is why we proudly carry CWE-Certified Warehouse Equipment racking. Engineered and certified to meet or exceed North American safety standards, CWE racking is internationally recognized. All manufacturing processes are ISO 9001 certified, and are audited for compliance to ensure quality standards.

All welding meets the ISO 3834 international standard requirements for fusion welding of metallic materials and the engineering behind CWE racking uses the latest ANSI and CSA standards.

SALES & DISTRIBUTION

CWE racking is only sold by selected dealers who have the required knowledge and expertise to properly assemble and complete racking projects to ensure the desired integrity and durability of the product.

All Lift stands out as a trusted partner within the CWE network, offering customized warehouse storage solutions that cater to diverse requirements, regardless of the project's scale or complexity. Committed to meeting the unique demands of every industry and respecting budget constraints, All Lift provides a seamless experience, ensuring that every racking project is executed with precision and efficiency.

Safe Designs—Successful Projects

DESIGNED FOR STRENGTH

Our racking systems are meticulously engineered to embody strength and durability, ensuring they withstand the rigors of warehouse environments, including impacts from pallets and lift trucks. Leveraging proven engineering practices, we craft storage solutions that are as resilient as they are reliable.

Our dedication to quality extends beyond design; we rigorously audit and test our products to ensure they surpass industry standards. This commitment to excellence positions us as a trusted partner in the warehousing industry, offering racking solutions that are not only robust but also designed to support your operational needs efficiently and effectively.

NORTH AMERICAN PROFILES

All Lift offers Redirack and Teardrop profiles, the most commonly used connection types in North America, ensuring future compatibility with domestic supply sources.

QUALITY MATERIAL

We use a high-strength structural steel (A572), of various thicknesses, in our products. These thicknesses are highly controlled to ensure quality, and our steel produces yields of 50 K.S.I. or 345 MPa.

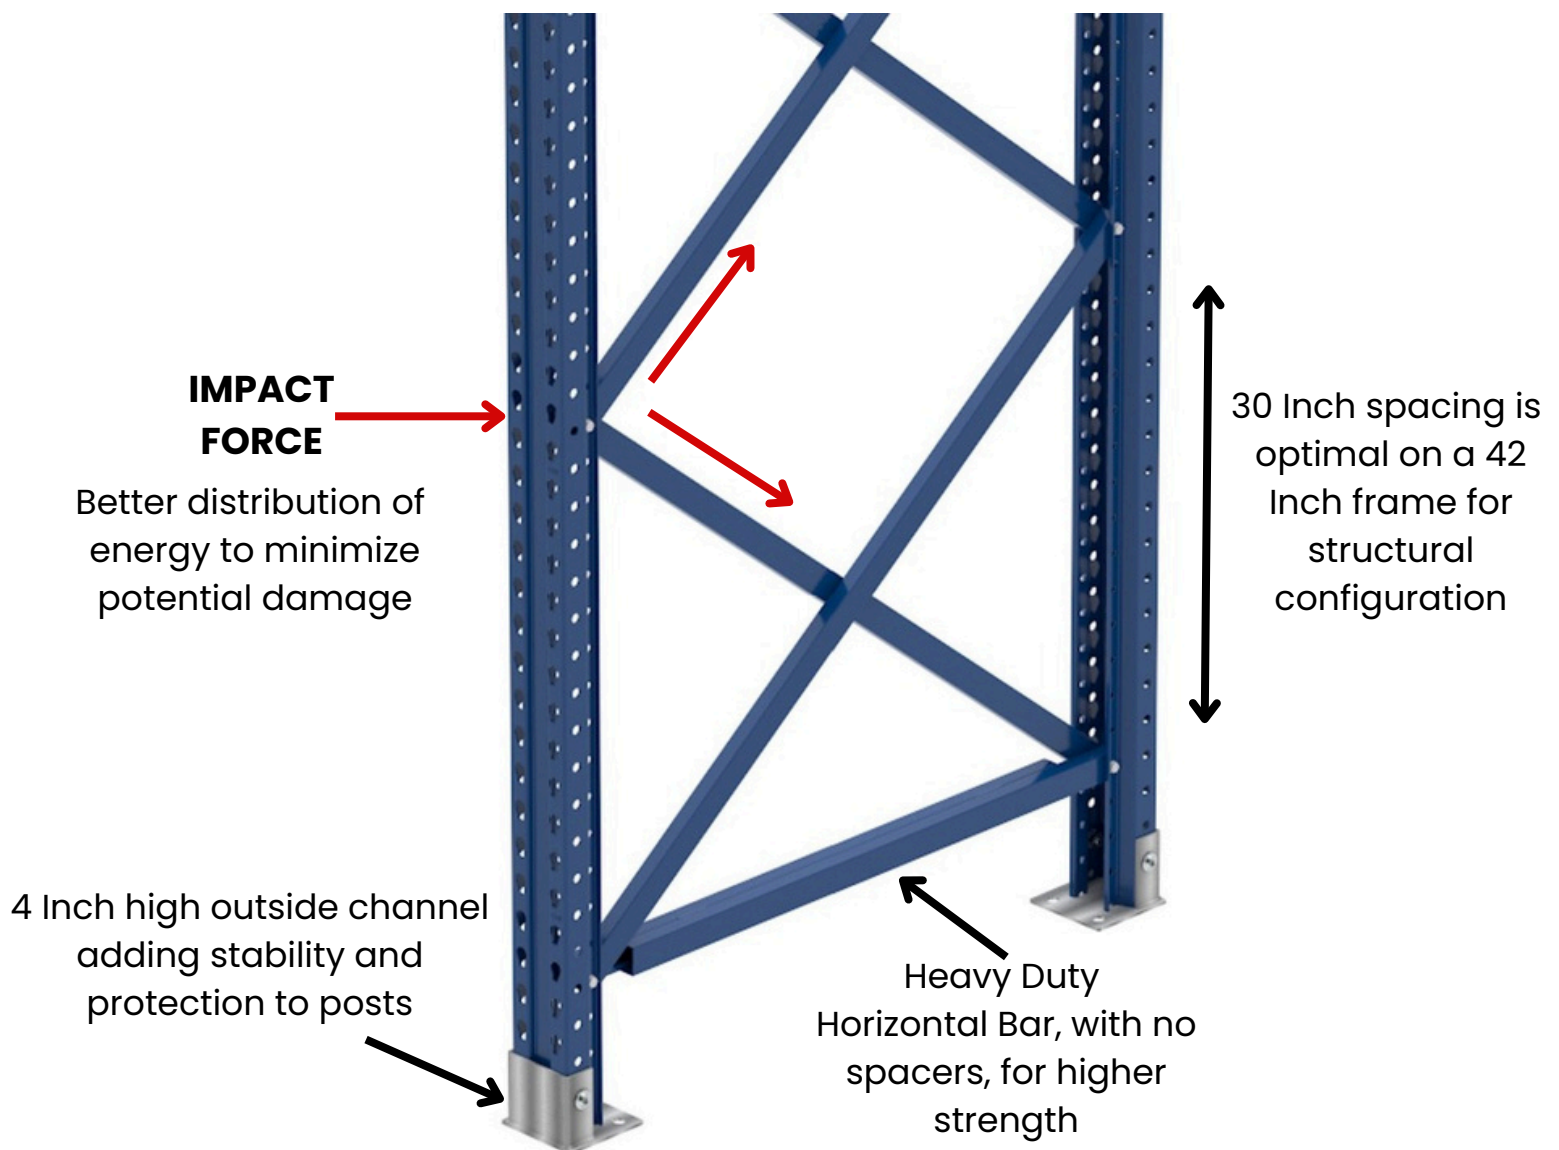

Frames

DESIGN FEATURES

All of our frames are made with high-strength steel (A572) and have an “X” bracing design on the lower portion of the frame. This design provides additional strength, support, and protection against the impact from pallets and lift trucks.

Our base plates have a 4 Inch high outside channel design to help reduce post damage and ensure additional structural stability

We use heavy-duty horizontal bracers along the bottom of the frame, eliminating the need for “spacers”, strengthening the frame.

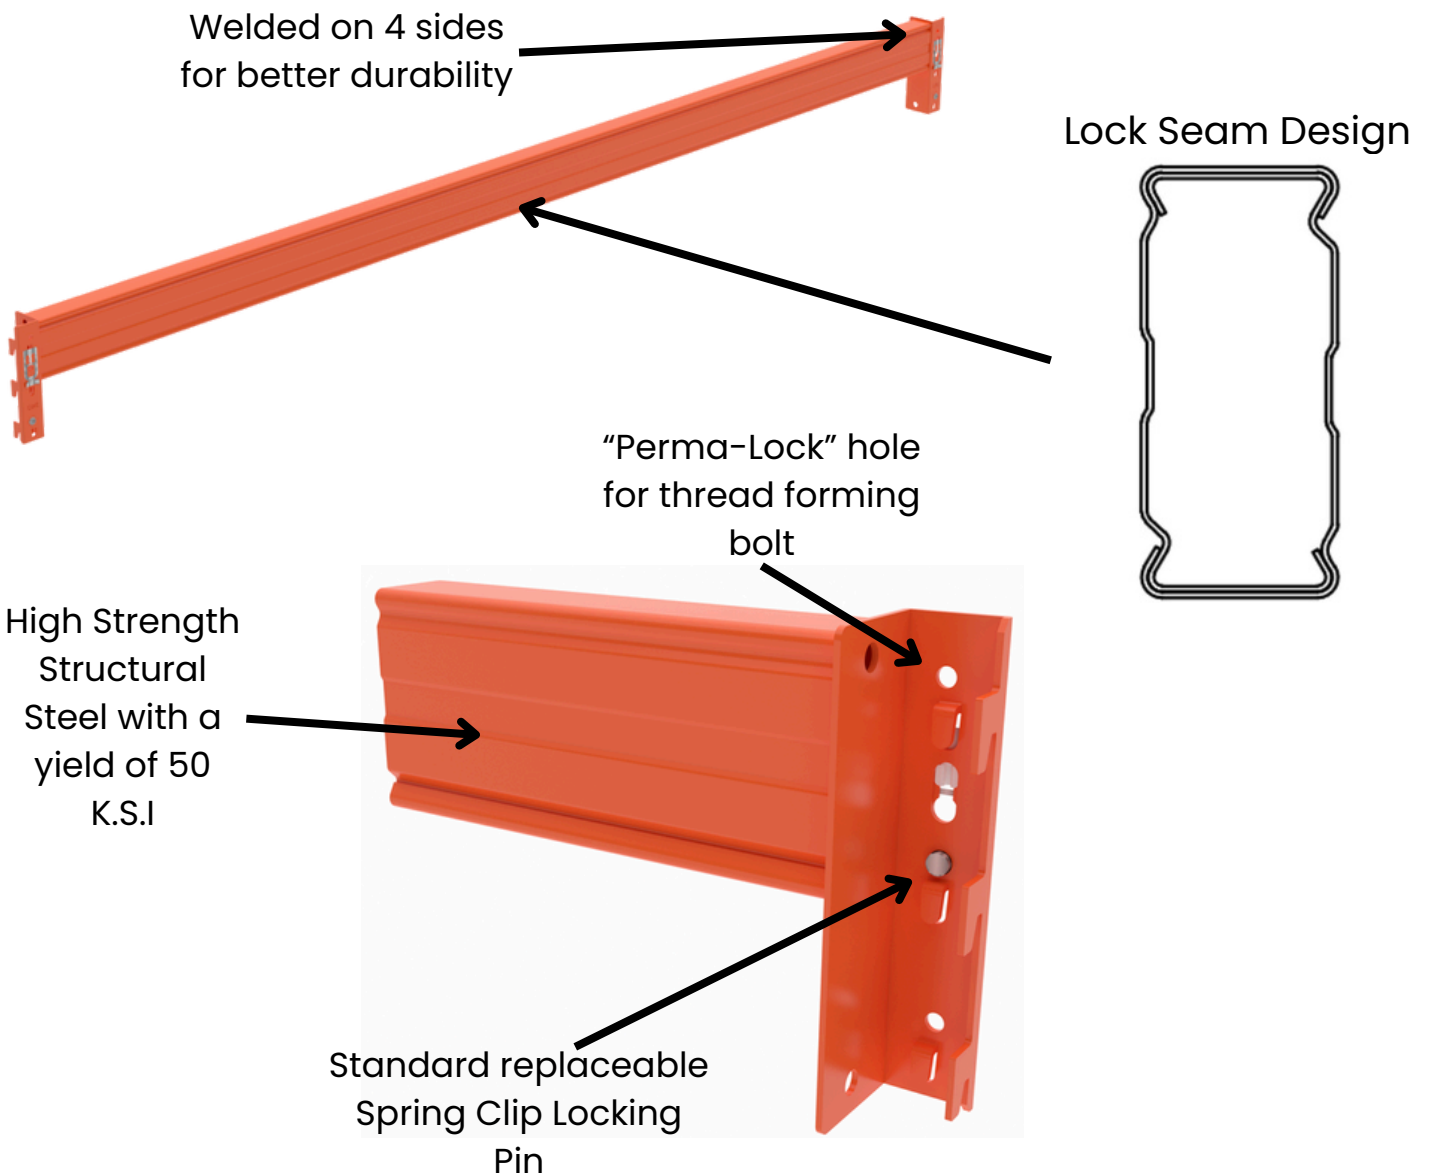

Beams

DESIGN FEATURES

All of our beams have a lock seam design, combining two sections for long-term durability.

Perma-Lock holes on our beams allow for a thread forming bolt, providing a tamper-free, high-strength locking pin.

We use high-strength structural steel producing yields of 50 K.S.I. Furthermore, our beams are welded on all four sides for better performance and durability, all meeting ISO 3834 welding standards.

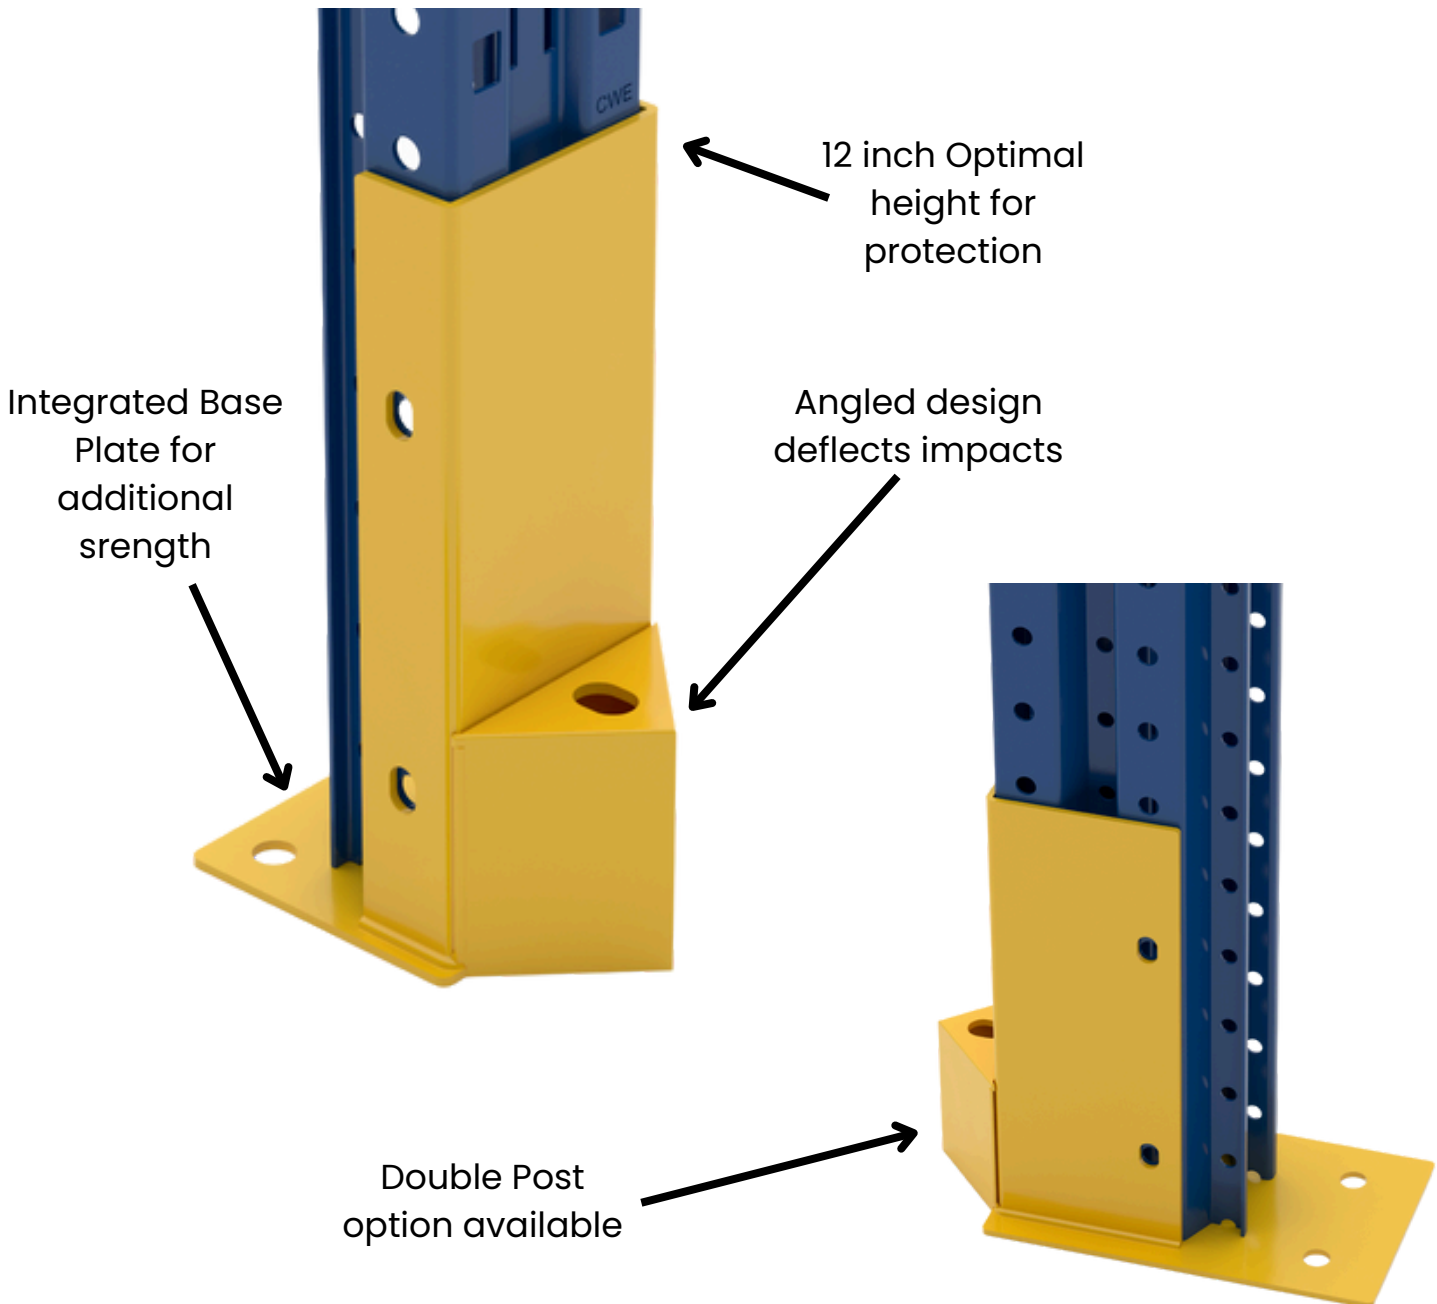

Post Protector

DESIGN FEATURES

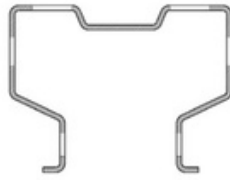

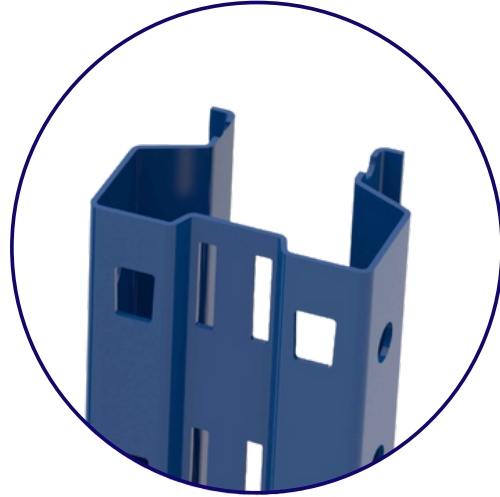

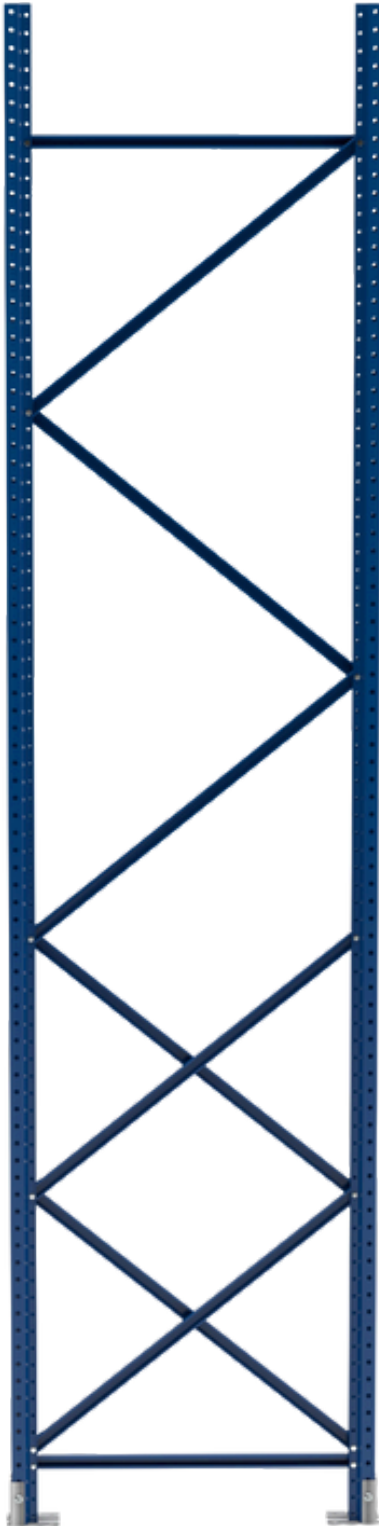

Our bullnose style post protector offers solid protection for our frames. At 4mm thick, this protector also has an integrated base plate for extra strength and durability

The standard overall height of the protector is 12 inches and the bullnose angle section stands at 4 inches, offering protection at a level where most impacts occur. However, different heights are available upon request.
